- Black, fiberglass composite wrap tape locks in heat and reduces the radiant heat by 50%
- Includes 2" x 25' roll of black wrap tape, two Vance & Hines Wrap Clamps and six locking stainless steel ties

IMPORTANT NOTICE: Use of this Vance & Hines Header Wrap Kit (PART #1861-0622) may void all warranties of the exhaust system that this Kit is applied to. Header Wrap functions to insulate heat generated by exhaust gases flowing through the headpipe, thereby raising the headpipe temperature beyond its intended operating temperature. Using heat wrap may compromise the integrity of the headpipe material, and may ultimately lead to cracks in the headpipe and will not be covered under warranty. Use of header wrap on an exhaust system is a modification to, and not a normal use of, an exhaust system. This notice is intended to inform the buyer to consider this possibility before using this product.

FRONT TOW HOOK

FOR POLARIS RZR 1000 14-18 (ALL), RZR TURBO 16-18

- Heavy-duty front tow hook for most Polaris RZR models

- Mounts below the winch area so it normally will not interfere if you have a winch mounted
- Will NOT fit with most front bumpers
- Black powdercoated finish will look great for years

ELITE PIVOTING RISERS FOR 22 MM ($^{7}/_{8}$") OR 28,6 MM ($1\,^{1}/_{8}$") HANDLEBARS

- Pivoting risers are incredibly universal with a two-piece design that allows them to be clamped to any machine with 22 mm ($^{7}/_{8}$") handlebar clamps
- Allow you to clamp a stock 22 mm ($^{7}/_{8}$") diameter handlebar, or you can remove the 22 mm ($^{7}/_{8}$") reducers and clamp a 28,6 mm ($1\,^{1}/_{8}$") aluminum handlebar; reducers lock into risers to ensure no slippage between components, and serrated teeth provide maximum gripping power on the handlebar
- Risers are held by the original 22 mm ($^{7}/_{8}$") clamps and reclamp the handlebars 51 mm (2"), 89 mm ($3\,^{1}/_{2}$") or 12,5 cm (5") higher (depending on size purchased) with pivoting fore and aft adjustment
- Rox outboard positioning also makes them incredibly durable

NOTE: Longer cables may be required when installing handlebar risers.

CONTROL CABLES

- OEM-style cables are available in a wide variety of applications for most popular models
- Cables have nylon-lined housings and use precise OEM component dimensions
- Terminator clutch cables are available for several models; wires in the outer casing are wound lengthwise instead of around the cable to eliminate compression and spongy clutch feel

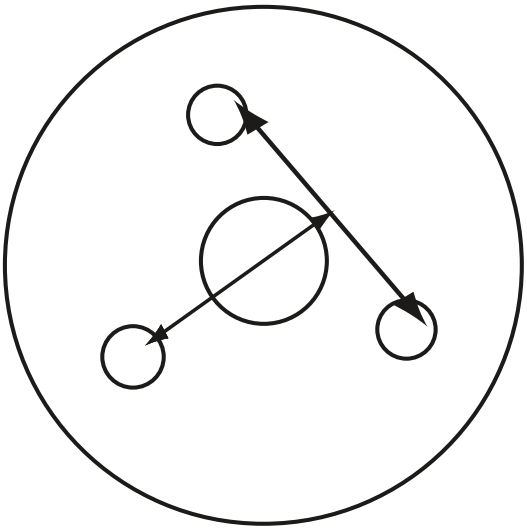
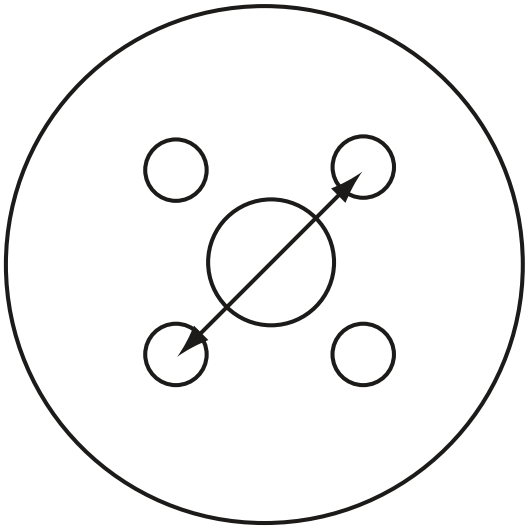
ATV WHEEL APPLICATION CHART

HOW TO MEASURE BOLT PATTERN

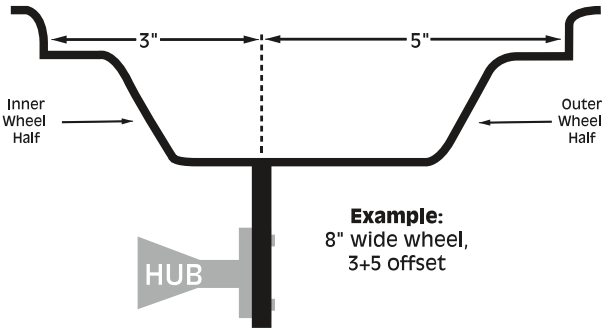


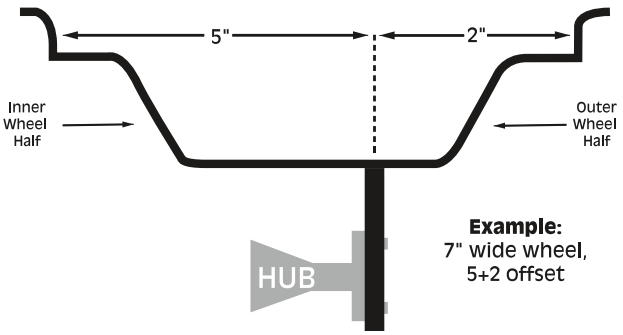
3-LUG - Middle of one hole to outside line across other two holes (examples 3/100)

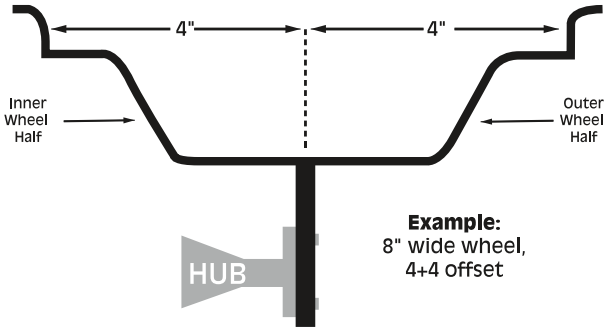


4-LUG - Middle of two holes directly across from one another (example 4/110)

NOTE: Wheels listed as Replacement Steel are ITP (see pages 328-329) or AMS (see page 340).







Additional Note: ITP's SS Alloy series of wheels have an "ET" cast into the back side of the spokes. Loosely translated from its German origins, this represents the "insertion depth" of the wheel, which is the offset of a wheel in distance from its hub mounting surface to the centerline of the wheel.

WHEEL BEARINGS

- Kits include all required bearings and seals
- Front kits are per wheel; rear kits are per axle unless noted
- High-speed, low-drag bearings are EMQ quality
- Bearing seals are double-lipped rubber that provides superior exclusion of water, dirt and sand with improved grease retention
- Wheel seals are type TC nitrile elastomer, specifically designed to keep out water, dirt and sand
- Seals have a rubber-coated outside diameter that creates an optimum seal at the hub
- Steel garter spring guarantees constant pressure on the axle shaft, extending the life of the seal

FRONT STRUT KITS FOR POLARIS

- For Polaris models that use a McPherson strut in the front
- In two-wheel drive the wheel bearings are engaged
- In four-wheel drive a magnetic clutch is activated in the strut tower and the axle is driven through the strut bearings; the wheel bearings are locked out

MOOSE RACING — BEARING GREASERS

- It's a well-known fact that the stock wheel bearings are dangerously low on grease right from the factory and bearings will wear out quickly if you don't pack them with additional grease
- Keep them running longer and stronger by using this trick bearing greaser
- It handles all the dirty work for you – just remove the wheel and axle nut, slide the greaser in place and pump it full of grease
- You'll be amazed at how much grease they will take
- Even old bearings will benefit, getting rid of any water or dirt that may have built up in the bearing, possibly causing premature failure

BRAKE PADS

- Sintered metal pads offer a powerful initial bite and optimal wear resistance in extreme conditions
- They provide a progressive feel at the lever and offer high thermal stability up to 600 °C/1000 °F degrees; no fading on high-speed downhills
- 100% compatible with OEM stainless steel rotors, but are designed especially to match Moto-Master brake rotors in performance and feeling
- Bedding-in time is low as optimal pad/disc contact is achieved after eight to 10 stops

11 COMPOUND

- All-around sintered pads for off-road and MX competition with a high performance/wear ratio
- ECE-R90 approved

21 COMPOUND

- Sintered, high temperature- and high wear-resistant pads are ideal for wet MX, Enduro and Rally Raid use
- Not ECE-R90 approved

22 COMPOUND

- Sintered, high temperature- and high wear-resistant pads are ideal for wet MX, Enduro and Rally Raid use, softer than the 21 compound for increased stopping power and optimal rider feedback
- Not ECE-R90 approved

G-FORCE™ DRIVE BELTS

G-FORCE™ C12 DRIVE BELTS

- The first CVT belt utilizing a carbon tensile cord, combining minimal stretch with extraordinary strength
- Carbon tensile cords are bonded with aramid fiber-loaded rubber with a specially formulated adhesion gum; this results in increased side-load resistance, preventing belt distortion and edge-cord pullout
- Gain optimal power transmission for faster acceleration, improved throttle response and consistent shifting performance

G-FORCE™ STANDARD DRIVE BELTS

- OEM-constructed drop-in belt with no clutching adjustments
- Viability testing completed to match shift curves
- Dynamometer testing proves G-Force belts outlast other high-performance belts by as much as five times
- Advanced aramid tensile cords and reinforced fiber-loaded undercord are used in construction for durability and dependability
- Proprietary measuring technology ensures exact fit
- Construction utilizes double- and single-cog configurations to match OEM belt designs maximizing heat control and flexibility

520 FB CHAIN

- This is the top of the line. The strongest, most durable sealed chain that we offer
- FB = Fine Blanking, an incredibly precise manufacturing process that yields perfectly cut links
- Tight tolerances make the plate, pin and bushing union accurate and strong
- Due to the accuracy of the cuts and the use of stronger alloyed steel, the FB has our highest tensile strength rating, nearly 8000 lb
- Special sealing rings are chemically treated to gain strength and reduce friction
- The FB treatment allows the O-rings to be impregnated with grease
- FB rings are stronger and more durable than X-rings, with significantly less friction
- Gold links and rollers, silver inner plates, pins and bushings
- Clip-type connecting link included
- Recommended for applications 450cc and above
- Replacement connecting link available

DRIVE CHAINS

- Exclusively manufactured for ProX by the reputable and leading OEM factory in Japan
- Pins feature special treatment providing an extremely hard coating, leaving them softer inside to increase strength while reducing overall chain wear
- Pins are heavy press-fitted and do have quad-staked riveting for ultrastrong connection
- Solid-type bush, roller and plates are all heat-treated for incredible tensile strength in combination with low friction and high wear resistance
- Inner plates are designed in specific shape and in combination with unique lightening hole, resulting in 3% overall lighter chain
- X-Ring type chain uses QX-type seal offering 40% less friction and at least 150% increased durability over standard MX chain
- All chains are pre-stressed and pre-stretched to reduce initial chain stretch and immediate performance
- Chains come with a clip-type chain link as standard
- Separate chain links available for each type of chain

Front sprocket

Rear sprockets

SPROCKETS

ALUMINUM REAR SPROCKETS

- Computer-designed to meet your ATV needs
- CNC-machined, not stamped like so many other sprockets
- Sprockets are constructed from 7075-T651 aluminum and hard-anodized black for superb strength and light weight
- Moose's non-grooved design means more aluminum stays in contact with the chain for longer sprocket life

CHROMOLY STEEL FRONT SPROCKETS

- Machined from impact- and wear-resistant chromoly steel
- Inner splines are broached to provide maximum spline-to-countershaft contact; this helps distribute driveline forces over the largest possible area
- Heat-treated, then finished with a nickel coating for corrosion resistance and lubricity
