CLUTCH PLATES AND SPRINGS

- Clutch friction plate kits are supplied as a separate kit from springs and drive plates
- Different friction materials are used to match original specifications
- Friction plates should be allowed to bed in to avoid glazing friction surface
- Drive plate kits are corrosion-free steel
- Drive plate thickness and dimensions correspond to original
- Check old plates for color and wear and preferably replace at the same time as friction plates
- Clutch springs are approximately 10% stronger than original springs
- Clutch springs' increase in strength is achieved either through the extra length or by tighter winding

NOTE: Some synthetic oils increase the danger of clutch slip with friction plates.

FLO STAINLESS STEEL, REUSABLE "SPIN-ON" OIL FILTERS

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO Oil Filter pleat seam is welded and able to withstand up to 316 °C (600 °F)
- Filter maintains consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups
- High tech filter technology widely used in all types of auto racing including NASCAR, Indy type cars, Formula 1 and the aerospace industry
- The last filter an owner ever needs

RADIATOR CAPS

- Old and faulty radiator caps can cause steam and fluid to be pumped out of the radiator overflow hose
- A replacement cap is the least expensive and easiest way to solve or troubleshoot your liquid cooled bike/ATV radiator problems
- Upgrading to a high-pressure 1,6 bar, 1,8 bar or 2,1 bar from the stock radiator cap is the simplest and least expensive way to avoid over-boiling your engine
- Raising your cooling system's maximum operating pressure increases your coolant's boiling point, allowing you to ride harder and longer
- Black finished cap
- Universal fit for most Japanese models along with 2016-to-current model fitments for all KTM/Husqvarna, and from 21-22 all Gas Gas fitments
- High-temperature corrosion-resistant silicone seals

DYNOJET

JET KITS

FOR UTILITY AND SPORT ATVS

STAGE 1 KITS

- Designed for ATVs with stock engines using the stock airbox, air filter and stock or aftermarket exhaust
- Fully adjustable to allow for the use of well-designed aftermarket exhausts and stock replacement air filters
- Improves throttle response and drivability
- Power increases of approximately 5% throughout the entire power range

STAGE 2 KITS

- Designed for ATVs with stock or mildly modified engines using well-designed stock or aftermarket exhausts with a modified airbox and a stock or replacement air filter
- For applications where individual air filters cannot be installed and where airbox modifications improve overall engine performance
- A power increase of 8% can be achieved in most cases

STAGE 3 KITS

- Designed for ATVs with stock or mildly modified engines using individual air filters and a stock or aftermarket exhaust
- In most cases, power increases of 10-15%; drivability may be compromised in short-stroke high-rpm motors
- On some modern engine and airbox designs, individual filters and proper jetting offer no performance improvement and compromise drivability; Stage 3 kits are not available in such cases

STANDARD AND BACKFIRE FILTERS

- Twin Air dual-stage filters are the choice of top factory teams and riders worldwide
- Dual-bonded foam design filters out even the smallest dirt particles, while allowing more airflow than two separate layer filters (flow bench proven)
- Flat foam sealing ring provides a secure seat against the airbox, even in the worst riding conditions
- Twin Air filters are slightly smaller than stock, making them easier to change while increasing dead air space around the filter for better performance
- Backfire filters include a laminated layer of backfire-retardant foam

FACTORY PRE-OILED AIR FILTERS

- The same factory treatment that race teams and OEMs receive is now available for all Twin Air users
- Filters are pre-oiled with Twin Air Bio-Foam Filter Oil using our state-of-the-art filter oiling machines to provide the ultimate consistency in pore coverage
- Same industry-leading Twin Air Filter you are used to, now pre-oiled for your convenience
- Comes in a new, resealable bag for added convenience
- Available in standard Twin Air replacement filters and PowerFlow Twin Air replacement filters
- PowerFlow replacement filters include Backfire Filter

POWERFLOW KITS

- Don't let your stock setup rob you of power and engine reliability
- Eliminates leaks and provides more air for power, but the filter can still be removed in a snap for cleaning
- The new generation PowerFlow kit converts the filter mounting system from a clamp-on filter to a filter cage and wing bolt mounting system
- This new flange system allows for the use of a Twin Air Airbox Cover for washing the airbox

AIRBOX COVERS

- Remove the air filter and pressure wash the inside of the airbox by covering the carb inlet with a watertight cap
- Made of PVC with a rubber sealing ring
- Top screw included

STOCK REPLACEMENT KITS

- Replacement filters that require other parts like a reducer, cage, spring or something else
- Kits contain all necessary parts needed for each application

1011-2342

GRAND PRIX FILTER COVERS

- Nylon filter cover helps prevent dust, sand and mud from clogging your filter

AIR FILTER DUST COVERS

- Coarse foam pre-filter will act as an additional layer of protection and extend service time between filter cleanings

UNIVERSAL CLAMP-ON AIR FILTERS

- K&N universal air filters come in four styles — round straight, round tapered, oval straight and oval tapered
- All round straight types and oval tapered types have rubber end caps (unless noted differently)
- All round tapered types have chrome end caps
- All clamp directly to the carburetor throat, replacing the stock airbox and filter element
- Pleated design increases surface area airflow
- Match the outer diameter (OD) of your carb throat with the inner diameter (ID) of the filter (given in inches and millimeters)

F = Inside Diameter
D = Filter Diameter

POWER-FLO DIRT VALVES

- Provide maximum fuel for combustion – test results have proven as much as twice the fuel flow over stock petcocks
- Won't restrict fuel flow to the carb
- Eliminate the stumble in long whooped-out sections
- Keep the carburetor full of fuel at all times
- Ensure consistent fuel mixture under all conditions
- Machined from lightweight billet aluminum; not a cast piece like the OEM petcock
- Lighter than the stock petcock
- Use stock mounting holes and hardware

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2204 °C (4000 °F)
- Because the iridium electrodes of these plugs can be shrunk to only 0,4 mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order and stock these plugs

POWERMADD

E3 SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and improved engine performance
- A truly premium performance plug
- Sold each

OEM Output Cap

STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

RELAYS

- Direct replacement relays by the original manufacturers, not reproduction units
- Each relay is the exact same voltage and amperage for a worry-free installation
- These relays are used to control functions like the fuel pump, power steering, cooling fan, EFI, etc.
- Most machines use multiple relays and are located in the fuse box

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

WIRE GAUGE SELECTOR

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.
