POWERBOMB HEADERS

STAINLESS STEEL

- Utilize FMF's patented module precisely located at the initial stage of the header for specific applications
- Position "Bomb" increases performance
- Horsepower is increased as much as 10%
- Act as "pre-muffler" helping to lower the decibel output
- The expansion and contraction of exhaust sonics through the system causes increased flow
- Available in stainless steel for strength combined with light weight
- Select applications available in SX version that is designed for more low to mid-range power and an MX version that is focused in the mid-to-upper rpm range

PIPE GUARDS BY E LINE

- Moose Offroad pipe guards offer the most protection, style and durability on the market
- Custom-molded to fit perfectly every time
- Antiballistic composite material, fiberglass and high-temp resins yield an exceptional guard; 8 times stronger, 2 times stiffer, yet 1,5 times lighter than aluminum
- The level of heat reached by 4-strokes causes pipes to ding easily; it can also burn your pants and leg; end the hassle by installing a Moose Racing pipe guard
- Our pipe guards distribute impacts over a large area; aluminum guards cannot duplicate this effect

SPARK ARRESTER END CAPS

- The stock silencer looks and works great, is very quiet and very light, so instead of replacing the whole silencer we can offer you a more cost-effective option
- Our end cap was designed using the latest CAD design software
- Designed to offer maximum performance; in our testing we found no power loss from the stock end cap
- The EE screen-type spark arrestor makes maintenance very easy; by simply removing two bolts the screen can be removed for replacement or servicing
- The easy access to the screen is great for riders who use their bikes for closed course and off-road – no need to have two silencers

[1] When choosing a repack kit for a spark arrester silencer, subtract 14 cm (5,5") from the length of the muffler body for the actual packable length and order based on that length. Example: An FMF Turbine Core 2 with a 35,5 cm (14") L body will have a 21,5 cm (8,5") packable length. Order the next longest length. Use this rule for Pro Circuit also.

[2] Measure muffler shell length along the bottom of the silencer.

CUT-TO-LENGTH PILLOWS FOR AFTERMARKET MUFFLERS

- Measure the distance around the outside of the muffler's shell to determine its circumference

FACTORY LINKS OEM SERIES RACE SERIES STEERING REBUILD KITS

- Outer seal lip extends over the frame cup to block direct entry of water, mud, and debris — a major upgrade over flat OEM gaskets
- Stack-on top seal is engineered with high interference fit to seat firmly in the steering head bore — zero wobble, zero migration
- Designed to match OEM assembly method for Honda CRF frames, ensuring perfect fit and compatibility without press tools
- Angular contact lips dynamically adapt to steering movement and bearing preload, maintaining a tight seal under pressure and flex
- Forms a complete enclosure with the bearing to preserve grease, reduce contamination, and extend service intervals
- Proven in real-world offroad and MX conditions for durability and performance under pressure washing and extreme terrain

MOTO MOUNT KITS FOR HAND GUARDS

- Aluminum moto roost deflector mounting kit fits most modern dirt bikes that have many buttons, switches, etc., on the handlebars, not leaving you much room for mounting anything extra on the handlebars
- Mount kit is designed for open-ended moto Roost deflector and Roost Deflector 2 hand guards and mounts to the perch of the clutch and brake levers by replacing the mounting caps
- Provides valuable space on the handlebars for controls like kill switches, e-start buttons, holeshot buttons, map switches, light switches and more
- Composite deflector arm now has a pocket milled into it allowing the composite arm to have a controlled flex
- Newly designed composite arm paired with our new aluminum mount makes this the strongest open ended deflector on the market
- No floppy feeling with these moto roost deflectors

NOTE: Use Contour 2 Roost Deflectors with these mount kits; sold separately, see page 130.

Motion Pro

REV3™ VARIABLE RATE THROTTLE SYSTEMS

- The new 3rd generation Motion Pro Revolver variable rate throttle system is here!• Innovative reel changing system lets you tailor the throttle rate to your preference and riding conditions
- 5 different reels provide perfect throttle response for any condition; use smaller reels for slower throttle rate and larger reels for faster throttle rate; included cam reel provides progressive throttle response preferred by some riders
- Slim REV3™ throttle housing allows more room for lever clearance and adjustment to throttle housing position
- Improved throttle stop provides greater strength and durability
- Snap-together elbows make it even easier to install and change reels
- Cable boot keeps dirt and dust out for reliable and smooth operation
- Billet aluminum inline cable adjusters ease installation and adjustment
- Lower section of cables use 5 mm housing with PTFE liner for reduced friction, increased routing flexibility and lighter weight
- Upper section of cables use 6 mm housing to provide solid support of adjusters
- Designed for use with stock carb/throttle body
- Simple to install and maintain
- Kit includes: REV3 throttle assembly with throttle tube, REV3 black vinyl cables specifically designed for your bike, four interchangeable round reels: 35 mm, 40 mm, 45 mm, 50 mm and offroad profile cam reel (gray)

NOTE: REV3™ throttle kits require a minimum of 200 mm of handlebar length in order to provide sufficient clearance between the throttle housing and hydraulic brake lever.

NOTE: REV3 kits have cables specifically designed for fitment on specific models, but the REV3 throttle itself is not model specific. Therefore, in some situations, the REV3 kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the REV3 throttle tube and grip, install longer aftermarket handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle and ensure that the REV3 kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function.

WARNING: Improper installation could result in great bodily injury or death.

FUZION AND FUZION PRO THROTTLE TUBES

- Utilizing the snap-on cam system from ODI's V2 Lock-On™ Grips, the Fuzion Pro throttle tube may very well be the last throttle tube you ever have to buy
- Changing bike brands? ODI understands – just change the cam (if needed) and you're good to go on your new ride
- CNC-machined 6061 alloy
- Slim profile bearing adds only 6 mm to the end of the handlebars – half the length of other brands
- Fuzion Pro throttle tube adds a sealed bearing system that includes O-rings for a more universal fit in different handlebars
- Includes throttle cams to fit most 125 to 500 cc models; compatible with V2 throttle cams for additional fitment options (available separately on page 172)

REKLUSE clutch rEvolution

LEFT-HAND REAR BRAKE KITS

- The perfect complement to an auto clutch, the Rekluse Left-Hand Rear Brake allows riders to operate the rear brake using their left hand
- The new system features a Rekluse-engineered and -manufactured full-size billet master cylinder featuring Rekluse Rail Adjuster (RAD) Mount Technology
- This provides high-performance braking power with expanded mounting options to better position the lever without disrupting other controls, or hand guards
- The Left-Hand Rear Brake by Rekluse maintains the function of the existing foot pedal – adding the ability to actuate the rear bike with the left hand helps riders navigate challenging terrain including steep declines and narrow ridges with ease
- In addition, it provides riders the ability to use their left hand to drag the rear brake in cornering situations for better line setup and control

HOT START TRIGGER

- Factory hot start levers are big, cumbersome appendages, poorly positioned near your clutch lever where you could unintentionally engage it while riding
- Reconfigured and resized to reduce accidental engagements
- Replaces plastic lever with cast aluminum, along with a precision ground bushing and machined cavity for greater durability
- Re-engineered with tighter tolerances, and superior fit and finish, for smoother operation
- Ergonomic design improves reach and pull

CONTROL CABLES

- Clutch and throttle cable assemblies
- Black PVC outer jacket for maximum flexibility and durability
- Steel inner casing is tightly coiled for low compression ratios
- A pre-lubricated nylon inner sleeve guarantees smooth operation and long life
- All wire ends are bird-caged prior to terminal casting for superior pull-out resistance
- EPDM molded rubber components for high UV resistance and long life
- Injected-molded components are manufactured from high-strength POM material

T3 SLIDELIGHT CABLES

- T3 cables reduce fatigue, provide better clutch feel and dramatically increase cable life
- The increased efficiency of Motion Pro's new T3 clutch cables provides a lighter, smoother pull, and significantly increased durability over conventional OEM cables
- In the course of a typical enduro, you might easily pull the clutch lever over 19 times per kilometer – in the course of an 80 kilometer race (50 Mile), a T3 clutch cable can spare your fingers over 181 kg of pulling (400 lb), reducing hand stress, fatigue and arm pump, and give you increased control at the end of the race
- T3 cables also provide dramatically increased durability
- Motion Pro's tests show that the liner on normal cables can wear out and result in metal-to-metal contact in less than 1.200 cycles, resulting in grinding, friction-generating metal-to-metal contact
- Test results prove that the proprietary liner material in T3 cables can last 30.000 cycles with only minimal wear, giving you a longer-lasting cable that provides consistent smooth performance long after conventional cables have worn out

MOOSE OFFROAD
STAINLESS STEEL BRAIDED CLUTCH LINES

- Venhill Engineering in the UK makes Moose Offroad Stainless Steel Clutch lines to the highest specifications
- Each line is made from top-quality PTFE-coated hose, wrapped with British-made stainless steel and PVC-coated for protection and great looks
- Rubber protection boots and extra rigid tubing are used to protect vulnerable areas from heat and impact and to prevent hose flex under compression
- Each line is designed to withstand a minimum of 14000 psi
- Installing our stainless lines gives a large performance increase by significantly reducing expansion under pressure, and absorption of water when compared to stock rubber hoses

CARBON FIBER SKID PLATES BY ELINE

- Thick composite plates with many advantages over aluminum
- The use of antiballistic composite material provides a longer fatigue life and greater tensile strength than aluminum
- Composite plates are molded to the exact shape desired, making for a closer fit and more protective plate
- Composite plates absorb vibration and do not amplify sounds like aluminum plates do
- When hit hard, aluminum permanently deforms, bending frame tubes and slicing into water pumps
- Composite plates will bounce back from hard hits and look great long after aluminum plates give up
- Skid plates protect the side engine cases and the water pump in addition to the frame and the center case
- Designed with a high front to keep mud from building up on the engine
- Mounting hardware included

XTREM RADIATOR GUARDS

- Especially made for Hard Enduro and developed with our pro riders in all conditions, these radiator guards offer a maximum of protection by wrapping the radiators and being against the central part of the frame to provide a maximum of rigidity and limit deformation
- Designed from 6 mm thick HDPE plastic with removable protection grids
- Provide more resistance to impacts, do not limit airflow and remove quickly to allow perfect radiator cleaning
- 4 mm thick aluminum base with spacers offering a strong rigidity

RADIATOR BRACES

- Cut in an aluminum plate 4 mm thick and light
- The protections are mounted at three points, two at the front and one at the rear
- This design laterally protects your radiators in the event of slow drops but also prevents them from rolling back during high-speed impacts
- The protection is provided for both sides with all the screws necessary for assembly

NOTE: Our radiator reinforcement will allow you to minimize damage. Radiator deformations may occur despite protection.

SEAT FOAM REPAIR KITS

- Includes motorcycle seat foam, not the foam commonly available through local upholstery shops, which is not dense enough for a proper repair on a motorcycle seat
- PART #F699 contains several pieces of dense base foam and a sheet of low-density cover foam for larger repairs
- PART #0810-1312 contains just the low-density foam 13 mm x 91 cm x 132 cm (0,5" x 3' x 52"), which is generally enough for cosmetic repairs where damage is 6 mm (0,25") or less (no large chunks included)

SPROCKETS

STEEL REAR SPROCKETS

- Manufactured from premium-quality C45 high-carbon steel
- CNC precision-machined to assure tight tolerances
- Machined with lightening holes
- Black powdercoated finish

ALUMINUM REAR SPROCKETS

- 100% German aluminum using ISO 7075-T651 for these sprockets receives an extra tempering which reduces distortion and provides optimal thickness
- 100% machined, no stamping or grinding
- Optimal tooth thickness results in maximum tooth and chain contact
- We leave the "cleaning" grooves out of our sprockets, because more aluminum contacting your chain means longer chain and sprocket life
- Moose Racing rear sprockets come anodized in black or silver; select Moose Racing rear sprockets are available in blue, red or orange

CHROMOLY STEEL FRONT SPROCKETS

- Machined from impact and wear resistant chromoly steel
- Inner splines are broached to provide maximum spline-to-countershaft contact – this helps distribute driveline forces over the largest possible area
- Heat-treated, then finished with a nickel coating for corrosion resistance and lubricity
- BE SURE TO CHECK FOR CLEARANCE WHEN ORDERING SIZES LARGER THAN STOCK

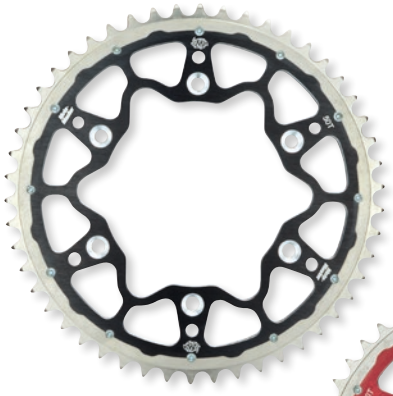
RENTHAL CHAINWHEELS



TWINRING™ REAR SPROCKETS

- Inner ring is the same high strength Ultralight™ 7075-T6 aluminum used for the standard Renthal sprocket
- Outer ring is electroless nickel-coated steel for ultimate durability and designed with the minimum amount of material to keep weight down
- The outer ring is expanded at 200 °C and then fitted over the inner; this interference fit combined with the wave pattern ensures a permanent bond for the life of the chainwheel
- Flat socket setscrews add additional strength to the chainwheel during side impacts and eliminate contact with the chain guide
- Self-cleaning mud grooves between each tooth prevent mud buildup and reduce chainwheel wear and weight
- Will outlast a standard all-aluminum sprocket by three times, yet is much lighter than an all-steel rear sprocket

- Computer-designed to achieve ultimate strength at minimum weight
- JT combines leading-edge technology with top materials to produce the ultimate quality sprocket range with unbeatable value
- Every sprocket meets or exceeds the highest possible quality standards
- Sprockets are heat-treated and bead-blasted to reduce material surface tension
- Front sprockets made with top-quality SCM420 chromoly steel alloy
- Steel rear sprockets made with top-quality Japanese C49/C50 high carbon steel; available as noted with an induction-hardened black zinc finish – these sprockets are made from C45 high carbon steel with teeth that are heat-induction hardened to 38-50 HRC
- Aluminum rear sprockets are made with high-strength Austrian 7075-T6 anodized aluminum
- JT aluminum sprockets are about 30% lighter than a comparable steel equivalent, which reduces unsprung rotating weight and improves performance
- Lightweight front sprockets available for some applications

RUBBER CUSHIONED FRONT SPROCKETS "RB"

- Used by the major Japanese motorcycle manufacturers since early 1990s to dampen the chain impact on the teeth of the front sprocket
