SHOCK ABSORBER RESERVOIR BLADDER CONVERSION

- Designed to reduce the amount of friction generated inside the shock absorber and increase the gas volume inside the reservoir
- This improves compliance on low-speed movements of the rear wheel and makes the shock react more consistently over differing temperature ranges
- Improves rear wheel traction
- reduces shock temperature
- Better damping stability
- Reduces friction

NOTE: Recommended to be installed by a suspension specialist as specific tools are required to disassemble the shock, please refer to the fitting instructions.

SHOCK BEARING KITS

- Kit contains two PTFE spherical bearings (cup bearings when used), four seals and related components
- Each shock kit rebuilds both ends of the shock absorber

NOTE: Some shock absorbers on Kawasaki and Honda models use a clevis to connect the shock to the linkage. The bearing, collar and seals that are pressed into the linkage arm are included in the Pivot Works Shock Kits.

MOOSE OFFROAD

SHOCK ABSORBER LINKAGE ASSEMBLY KIT

- The K-Tech linkage is designed to counter the 2023 KTM's negative attributes by reducing the ramping up effect which hinders many riders, whilst maintaining the original ride height position
- The same rate springs can be used with the K-Tech linkage and the OEM linkage
- Made from lightweight, aircraft grade materials

NOTE: Must be used in conjunction with the end cap; shock must be disassembled to install end cap.

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2204 °C (4000 °F)
- Because the iridium electrodes of these plugs can be shrunk to only 0,4 mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear even in the worst conditions
- Ground electrode features a tapered cut and U-groove that forms a large volume area for the flame's center
- Use NGK reference chart to order and stock these plugs

POWERMADD

E3 SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable
- Rebuild kit, PART #2110-0418, features armature, brush plate with brushes, bearing, bearing seal and bushing (not for units with T-Moric starter)

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

HOTCAMS
UNLEASH THE POWER WITHIN

HOT CAMS

- High-performance racing camshafts
- Stage 1 and Stage 2 performance camshafts are drop-in cams that are designed to be used with stock valve springs
- In most applications, Stage 1 cams deliver more torque and Stage 2 cams provide more peak horsepower
- Select cams feature Hot Cams Improved Throttle Design (ITR) technology; these cams improve throttle response throughout the entire rpm range while providing excellent power gains through the mid-range and top-end
- Builder Series camshafts offer engine builders a multitude of options for different engine configurations
- Builder Series camshafts were developed for engine builders that have specific requirements to maximize their particular engine configuration; see notes in the performance description for use with OEM valve springs or the requirement of stiffer valve springs

HIGH-PERFORMANCE ENGINE VALVES

- Titanium valves are stronger and more reliable than OEM because they're forged as one unit, rather than pieced together like stock valves
- Treated with either CVD or CNI (depending on the application), both applications are wear- and friction-reducers that resist heat penetration as well
- Stainless steel valves are manufactured to exacting tolerances from the highest-grade material; coated for longevity and peak performance
- Sold each

TITANIUM REPLACEMENT VALVES

- Crafted from military-spec certified TI3Al titanium alloy, these valves are made to endure the harshest racing conditions
- Forged from a single blank, grain flow is improved to enhance the mechanical characteristics of the valve without having to resort to welding
- Special PVD, CVD, and CrN coatings are used to provide low-friction surfaces that reduce heat generation and resist carbon buildup; coatings allow alloys like titanium to become ultra-smooth while reaching hardness levels 5x that of high-speed steel

VALVES, VALVE GUIDES AND SPRINGS

- Tensilite® Titanium valves feature one-piece U.S.-milled titanium alloy construction with a hard chromium nitride (CRN) shell; CRN offers excellent resistance to impact, abrasion and corrosion (Tensilite® valves are noted in the chart)
- Black Diamond™ valves feature one-piece stainless steel construction with stellite tips and special impregnation to improve wear properties and reduce friction; all valves are Black Diamond™ unless otherwise noted in the chart
- White Diamond® valves feature one-piece construction and hard chrome stems; White Diamond® valves are noted in the chart
- All valves are compatible with OEM and KPMI® valve guides and spring kits
- All valve guides are made of Ampco-45, a high-performance compound with 80% copper content to provide great heat conductivity and 5% nickel content for wear resistance (unless noted in chart)

VALVE SEATS

FOR TITANIUM VALVES

- Copper-based material designed specifically for use with titanium valves in high performance applications
- Gives the seat excellent thermal characteristics as well as resistance to corrosion and wear
- These seats are the result of a two-year KPMI R&D effort during which we recorded and verified results with 4- and 5-valve singles, multi-cylinder street bikes, as well as British and European 4-strokes
- In each test the wear, thermal conductivity and machinability surpassed the standards we set for success
- These seats are used by successful builders around the world in all forms of racing
- Sold each

NOTE: All applications listed use two intake and two exhaust seats unless otherwise noted.

IRON ALLOY VALVE SEATS

FOR STEEL VALVES

- Premium valve seats for applications using steel valves
- A specific combination of alloys allowed a creation of high density, iron-based valve seat with uniform hardness, exceptional thermal qualities and high resistance to wear and recession caused by microwelding
- Only by using the latest developments in powdered metal technology were we able to blend these alloys to give a seat material with the qualities required for today's engines
- These seats have been tested on the track and street in high rpm applications with leaded, unleaded and oxygenated fuel, as well as methanol, ethanol, nitrous and forced induction applications
- Sold each

NOTE: All applications listed use two intake and two exhaust seats unless otherwise noted.

NOTE: The seats listed below are only recommendations for specific applications. Always measure your application and have the valve seats installed professionally.

[1] This Athena cylinder kit assembled with OE CDI and exhaust gets much more torque (Nxm) than OE bike; in order to strongly increase horsepower to the wheel, it is necessary to use, at least, a racing exhaust system.

[2] YZ 125 97-98 models require the use of a 99 or newer exhaust pipe and silencer.

[3] Cylinder head not included. To use this kit on 97-98 models you must use a 99 exhaust and an 01 cylinder head; for 99-00 models you must use an 01 cylinder head.

CYLINDER SLEEVES

- Re-sleeve worn or seized cylinders with sleeves manufactured by L.A. Sleeve Co.
- An economical solution available for riders, racers and engine builders everywhere
- Centrifugal castings used in these sleeves are made from a carbon-chrome-molybdenum alloy of 200 Brinell hardness, ensuring ease of installation, trouble-free boring and a dependable, long-lasting engine

CYLINDER TYPE COLUMN EXPLANATIONS

- AC – Original cylinder bore is alloy-chrome plated, nikasil, or electrofused; cylinder must be bored to accept new sleeve
- CS – Original barrel has a cast-in iron liner in the cylinder; liner must be bored out completely (do not try to push out the cast-in liner)
- RS – Original barrel has a replacement sleeve

HIGH PERFORMANCE 4-STROKE PISTON KITS BY CP PISTONS

- Feature X-style forgings and fully boxed-style (race pistons) forgings for ultimate strength, minimizing friction, durability, power and weight reduction
- The Pro Race Piston increases the durability by allowing the pin to flex while removing stress from pin bore
- Full radius dome designs maximize quench while eliminating hot spots that promote detonation
- Internal bracing maximizes durability while decreasing friction in the pin assembly
- Fully boxed style (race pistons) forgings come standard with skirt coating which reduces friction, which in turn reduces heat (as noted in the application chart)
- Race piston kits include a DLC pin which is highly resistant to abrasive wear, for extended service life and reliability
- Each Moose Racing piston kit includes a high-performance piston, wrist pin, rings, circlips and a top-end gasket kit
- Replacement gaskets available from Moose Racing on pages 1239-1249

NOTE: Be sure to use race fuel with some applications (called out in chart).

FORGED PISTON KITS

- 2-stroke pistons are made from 4032 silicium
- 4-stroke pistons are made from 2618 silicium – the same material used to produce Formula 1 pistons
- Both include 3% copper in materials for better heat resistance
- All pistons are forged using a precision heat-treatment process that allows for production tolerances of just 0,01 mm
- Forged piston kits are available in A, B and C sizing
- Forged piston tooling allows for the lightest available product
- Kits include anti-wear coated piston, rings, pin and circlips

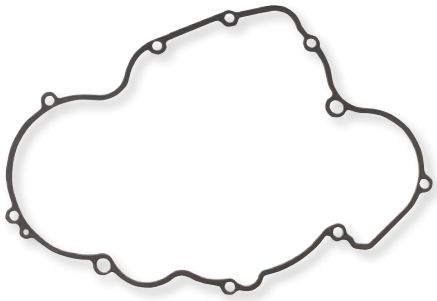
COMETIC GASKET

HI-PERFORMANCE OFF-ROAD GASKETS AND SEALS

- Gaskets and gasket sets used by professionals in high-performance machines and as OE replacements worldwide
- Each PART # contains the proper amount of gaskets for one application



Top-end gasket kit

Complete bottom-end gasket kit

Exhaust gasket

Clutch cover gasket

TOP-END GASKET KITS

- Top end gasket kits include correct base, head gasket and cylinder O-rings as well as other top end specific O-rings or seals needed for R&R of top end
- Materials will vary depending on what is correct and engineered for specified application
- Purchase a top and a bottom end gasket kit for a complete gasket kit when doing a total engine rebuild

COMPLETE AND BASIC BOTTOM-END GASKET KITS

- Basic bottom end gasket kits include cover gaskets; some kits have crank seals (see footnote in chart)
- Complete bottom end kits include all necessary gaskets, seals and O-rings for a complete bottom end rebuild including crank seals
- Materials will vary depending on what is correct and engineered for specified application

NOTE: GASKET DESIGNATIONS: Reed=R, Power Valve=PV, Exhaust=E

EST (EXTREME SEALING TECHNOLOGY) TOP-END KITS

- Ensure a critical seal and superior durability that meets and exceeds OEM specifications
- Gaskets are made from quality materials such as MLS (Multi-Layer Steel), rubber-coated steel and aluminum foam material
- Includes valve stem seals and copper crush washers where applicable

EXHAUST GASKETS

- Made for extreme temperatures
- Gasket material and construction will vary by application to ensure longevity with leak-free performance under all conditions

CLUTCH AND STATOR COVER GASKETS

- Clutch and stator cover gaskets are made from an AFM material which is a chemically-blown, compounded nitrile synthetic rubber bonded to an aluminum core
- Aluminum core gives the gasket strength for a superior seal and prevents the gasket from weeping or crawling out in today's engine cases with limited sealing surfaces
- No sealants required for installation
- Saves service time as AFM will not stick to the engine case, making replacement quick and easy, no more scraping

REKLUSE clutch rEvolution

CORE EXP3.0 CLUTCH KITS

- Core EXP3.0 is a centrifugal auto clutch featuring Rekluse's EXP (auto clutch) technology
- Full clutch control and use of the lever is retained for a no-compromise riding experience
- Core EXP3.0 offers dead-on clutch engagement every time and allows riders to take off and stop in gear without using clutch lever
- With Core EXP3.0, you'll confidently navigate traffic and slow-speed conditions
- Rekluse's billet center hub and pressure plate convert the clutch to six coil springs which improves lever feel, clutch performance and durability
- Increased oil passages in the center hub and pressure plate move more oil through the clutch, decreasing operating temperatures and increasing clutch life
- Installing Core EXP3.0 does not require modification to stock components
- Shifting the transmission remains unchanged (clutch lever use is recommended for shifting)

CLUTCH PLATES AND SPRINGS

- Clutch friction plate kits are supplied as a separate kit from springs and drive plates
- Different friction materials are used to match original specifications
- Friction plates should be allowed to bed in to avoid glazing friction surface
- Drive plate kits are corrosion-free steel
- Drive plate thickness and dimensions correspond to original
- Check old plates for color and wear and preferably replace at the same time as friction plates
- Clutch springs are approximately 10% stronger than original springs
- Clutch springs' increase in strength is achieved either through the extra length or by tighter winding

NOTE: Some synthetic oils increase the danger of clutch slip with friction plates.

DPK CLUTCH KITS

- Designed to outperform any OEM or aftermarket clutch
- DPK kits include friction plates, steel drive plates and clutch springs
- DP clutch kits come in a foam-lined hard plastic case that protects clutch components from being damaged prior to installation
- Case can be used to store and transport parts, tools or other items after clutch is installed

FRICTION PLATES

- Come ready to race – no need to presoak plates in oil
- Designed to ensure ultrasmooth power delivery
- Exclusive high-heat friction materials for fade-free performance
- Friction compounds designed to suit off-road and dual-sport bikes
- More durable than OE plates

STEEL DRIVE PLATES

- Steel plates won't expand; will not fade or promote clutch swell like stock aluminum plates
- Long lasting – up to 300% more life than stock plates
- Increased weight over stock plates adds flywheel effect for aiding starting and traction
- Will not muddy or contaminate oil

CLUTCH SPRINGS

- Precision-wound using the finest chrome silicon wire
- Heat-treated and shot-peened for maximum life
- Individually designed to ensure no slippage with super-strong spring rates
- Improves feel and ease of clutch operation

CLUTCH KITS AND CLUTCH SPRINGS

CK STANDARD SERIES

- Cork-based clutch material impregnated with aluminum particles to increase wear life and heat resistance
- Highly compressed construction avoids swell and clutch drag
- Ideal for general-purpose street/sport/touring bikes
- Kit includes complete engine set of friction plates only

CKF CLUTCH KITS

- Kit has carbon-fiber impregnated friction plates
- Tough clutch plates extend engine life, improve drive, increase the heat threshold of the clutch and improve rider feel
- Available for select applications; see chart

DRC SERIES CLUTCH KITS

- Anti-swell, alloy impregnated heavy-duty cork-based facings for smooth clutch take-up
- Allows modulation, unlike paper clutches, which tend to snatch
- Complete engine set of friction plates, HD springs and steel separator plates prevents premature drive plate wear, oil muddying and loss of stack height
- Built with swaged aluminum carriers that spread the load on the clutch basket and prevent clutch basket "dogging"
- Not for use with 100% synthetic oil

Clutch springs

DRCF SERIES CLUTCH KITS

- Heavy-duty clutch kit designed for hard use and race applications
- Features carbon-fiber lined clutch friction plates, a full set of steel plates and heavy-duty clutch springs
- Ideal for use in 4-stroke, high-torque engine applications; great upgrade for 2-stroke performance applications

CSK CLUTCH SPRING SETS

- It is recommended you replace springs when changing clutch plates
- EBC springs are 10% stiffer than stock
- Sold in engine sets

RADIATOR CAPS

- Old and faulty radiator caps can cause steam and fluid to be pumped out of the radiator overflow hose
- A replacement cap is the least expensive and easiest way to solve or troubleshoot your liquid cooled bike/ATV radiator problems
- Upgrading to a high-pressure 1,6 bar, 1,8 bar or 2,1 bar from the stock radiator cap is the simplest and least expensive way to avoid over-boiling your engine
- Raising your cooling system's maximum operating pressure increases your coolant's boiling point, allowing you to ride harder and longer
- Black finished cap
- Universal fit for most Japanese models
- High-temperature corrosion-resistant silicone seals

- Improved insulation promotes radiator efficiency and improved engine cooling
- Three layers of reinforcement fabric resist splitting, cracking or wrinkling and provide improved debris/crash resistance
- Zero block tooling technology results in clear and open hose junctions, free from dangerous and restrictive collapses
- UV-stable colors don't fade with heat or sun and are color matched to all OEM's
- Application specific hose clamp kits sold separately
- Available in either Direct OEM Replacement or Race Fit designs

OEM REPLACEMENT HOSE KITS

- One-to-one replacement for the OEM hoses
- Designed to fit perfectly in the stock configuration

RACE FIT HOSE KITS

- Feature a performance-focused bypass design, which replaces multiple individual hoses with one where possible reducing the overall number of individual hoses
- Reduces the number of potential failure points (like connections and seals) and often eliminates the thermostat, allowing the engine to run cooler and increasing reliability

RADIATOR HOSE CLAMP KITS

- Designed by Samco for exclusive use with hose kits and frame pieces
- Made from 304 W5 marine-grade 100% stainless steel and have a 13 mm band
- Non-perforated bands prevent clips from biting into the hose
- Rounded band edges prevent the clip from cutting into the hose

RADIATOR HOSE FRAME T-PIECE KITS

- Replaces the weak plastic OEM design on most KTM, GasGas and Husqvarna models
- Eliminates the thermostat on 24-25 MC/EC 125/250/300 and 24-25 EC/ES/EW 250F/350F
- Improves coolant flow and reduces engine temperature compared to OEM design
- Single molded hose piece design
- Eliminates vulnerable threaded leak points on some models
- Uses European grade hi-temperature automotive silicone guaranteed to 180 °C (356 °F)

DYNOJET QUICK SHIFTER (DQS) SENSOR PCV

- Races are won or lost in fractions of a second
- Dynojet's Quick Shifter (DQS) kit allows full-throttle, clutchless upshifts in racing and performance riding applications
- The shift rod pressure/tension sensor kit is a universal sensor that mounts to the shift rod in either a push or pull configuration
- Requires modification of gear-linkage tie-rod
- The linear travel sensor kit works with bikes that have no shift rod, or on those the shift rod sensor will not fit
- Mount one end to the shift lever and the other to a fixed point on the chassis
- Push- or pull-types available with universal mounting kit
- Plug directly into the Power Commander expansion port with no re-wiring required
- Power Commander Control Center software lets you set engine dead-time during upshifts and minimum rpm for system operation
- PART #1601-0330 is a "linear" sensor for PCV

NOTE: To order the above sensor, you must find the correct direction of movement during an upshift (push or pull). For the shift rod/pressure/tension sensor, press on the shift lever in the direction of an upshift to see if the rod is pushing or pulling on the clevis on the shift shaft. For the linear travel sensor, also move the shifter for an upshift. If movement is down, a pull sensor is needed. If movement is up, a push sensor is required.

VFORCE4X REED VALVES

- Introducing the all-new VFORCE4X reed valve for all GASGAS, Husqvarna and KTM TBI oil-injected models
- The intelligent design utilizes the OEM oil-injector providing for a straightforward installation, with no need to touch the oil line or injector and no bleeding necessary
- Gives a crisper throttle response, wider peak power and extended reed petal life because the SX 50/65 models aren't fuel or oil injected

VFORCE 3/3i REED VALVES AND REPLACEMENT REEDS

- Snap-together cage uses symmetrical reed petals, eliminating the need for different "inner" and "outer" replacement petals
- Reed tip shape accelerates air mixture, ensuring increased airflow for increased horsepower
- Screw-free design eliminates the risk of screws going through the motor and enables rapid petal change
- VForce 3i reed valve system with integrated intake boot available for noted 85cc models; 3i delivers a straight shot directly into engine cases for more balanced fuel/air distribution, newly designed reed stops for increased reed petal stability and a shorter reed cage for a noticeable performance increase due to lighter reed petals

NOTE: When ordering replacement reeds, order one set per reed cage.

POWER-FLO™ DIRT VALVES

- Provides maximum fuel for the fire – test results have shown as much as twice the fuel flow as stock fuel valves
- Eliminates the stumble in long whooped-out sections
- Keeps the carburetor full of fuel at all times
- Ensures consistent fuel mixture under all conditions
- Machined from lightweight billet aluminum; not a cast piece like the stock petcock
- Lighter than the stock petcock
- Uses stock mounting holes and hardware for easy bolt-on installation

UNIVERSAL CLAMP-ON AIR FILTERS

- K&N® universal air filters come in three styles — round straight, round tapered and oval tapered
- All round straight types and oval tapered types have rubber end caps (unless noted differently)
- All round tapered types have chrome end caps (unless noted differently)
- All clamp directly to the carburetor throat, replacing the stock airbox and filter element
- Pleated design increases surface area air flow
- Match the outer diameter (OD) of your carb throat with the inner diameter (ID) of the filter (given in inches and millimeters)

F = Inside Diameter

- Can be cleaned, re-oiled and reused like a dual-stage filter
- For use with DT-1 AirPower filter cages

- Use in combination with oiled DT-1 air filters for exceptional airflow, better throttle response and increased engine protection
- Triple Foam and Evo Triple Foam fitments fit only with DT-1 Triple Foam or Evo Triple Foam air filters

AIR BOX COVERS

- Prevent water and dirt from entering air box when cleaning your bike
