PERFORMANCE BASE LAYERING

LAYERING

EVAPORATOR REGULATOR INSULATOR

LAYERING SYSTEM

A proper layering system is the key to staying warm and dry while riding. Choosing the right layering garments is the first step towards this goal. Cotton-based garments are not recommended for use when layering because they absorb moisture and transfer the cold to your body. This includes sweatshirts and denim products.

Using products made from highly breathable fabrics like polyester and spandex helps to wick moisture away from your skin, keeping you dry and comfortable even when riding your hardest.

BATTERYMATE 150-9

LOAD TESTER/CHARGER

- This unique diagnostic load tester and constant current charger with automatic desulfating action saves valuable time in professional service workshops and prolongs battery life
- Six load test settings from 15A to 150A, suitable for all starter batteries from 2,5Ah to 45Ah

- The program terminates the important constant current "bulk charge" at the correct voltage appropriate for any one of the various types of MF batteries now available, according to their particular impedance characteristics
- Incorrect commissioning charging of motorcycle AGM type MF batteries is the single biggest cause of premature battery failure
- For all 12V lead-acid starter batteries of 2,5 Ah capacity or greater, as used in motorcycles, ATVs, snowmobiles, personal watercraft and garden tractors
- Recommended by most motorcycle OEMs

REPLACEMENT WINDSHIELDS

CLEAR, SMOKE AND GRAPHICS

450-117

450-129

- Precision cut to match OEM exactly
- Made from 19,05 mm (0,75") thick Uvex butyrate, which is heavier than most OEM models yet stays flexible at subzero temperatures (2,54 mm (0,100") thick windshields are also noted in chart)
- All windshields have permanently bonded trim for safety
- Graphics windshields are silkscreened to a solid black color at the base to cover mounting area, then fade out as they move up the windshield for style
- Several heights available (see chart)
- Tight quality control for a quality fit; manufacturer guarantees windshields against defects in material and workmanship

NOTE: All windshields are clearly labeled and shrink-wrapped so that your customers receive clean, unmarked, high-quality windshields. Upon receiving, please verify that your windshields are correct before removing the plastic shrink-wrapping.

TRACK APPLICATION CHART

- Camso offers a wide range of tracks for nearly every machine and any application
- Tracks are organized into six categories: high-performance trail, touring, cross country, mountain, racing and utility
- To find the track that suits you, locate your sled in the application chart, identify the size width, length and pitch, and reference that size under the particular track categories

NOTE: Not all tracks can be installed on all sleds without modification. The listings in the application chart fit OEM suspension, track width, length, and drive pitch only. To determine if an optional track is compatible with a particular snowmobile, you must check the bulkhead, tunnel, heat exchanger, and suspension wheel positioning for proper clearance. It is your responsibility to verify that there is adequate clearance for an optional track.

Camso's Cobra Track Lug

Camso's Cobra track has a unique lug design with 'traction teeth' that protrude about 0.100" above the lug. Available to stud are 2 lug heights: 1.352" (1.250" w/o traction teeth) & 1.600" (1.500" w/o traction teeth). On this track, Woody's recommends 3/8" max stud penetration above the most prominent lug height. With that, the 1.352" Cobra should take a 1325 series stud, and the 1.600" Cobra, a 1575 series stud. Keep in mind, the stud series is NOT the overall length.

These guides have been developed to simplify the studding process.

Examine the illustration above to understand the terminology related to studding.

After determining your track lug height, use the left chart to correspond the appropriate stud length and find your stud series.

As shown in the illustration, the stud series is the length (in inches) from the top of the backing plate to the tip of the properly torqued stud. This series is incorporated into **Woody's** part #.

No matter which style of stud you choose, the series # will give you the correct length.

Example: Series 1325
Woody's Part #: GDP6-1325 | SSP-1325 | GMP-1325 | etc.
Once you know the series, any style stud (appropriate for single-ply or two-ply) can be selected with that #.

Use the chart to the right to find the total qty. of studs needed based on track length & desired studs per lug.

Always be sure to use the appropriate length of carbide runners with your studs for balance & optimum control.

Consult a snowmobile dealer regarding the possibility for additional tunnel protection required.

Prior to studding, review the snowmobile manufacturer's studding recommendation in your owner's manual. You may void your warranty if their recommendations are not followed.

ULTIMAX® PRO

- Ultimax® 3 has evolved into Ultimax Pro
- Belt features a thicker cross section so more surface area contacts the clutch; this means less slippage over a broader speed range for quicker acceleration
- Double cog design makes the belt more flexible and dissipates heat
- Cooler-running belts mean better performance and longer-lasting belts
- Run cool, run long, run fast with Ultimax Pro

NOTE: The belt dimensions provided by Ultimax® are for reference only. These dimensions should not be used to determine product functionality. Ultimax belts are built to exacting specifications and inspected with calibrated equipment at specified tensions to ensure strict dimensional compliance. Belt dimensions can vary from one manufacturer to another based on proprietary design information.

HEADER WRAP KIT

- Features laser-cut Vance & Hines wrap clamps, black header wrap tape and locking stainless steel ties
- Black, fiberglass composite wrap tape helps lock in the heat and reduces radiant heat by a realistic 50%
- Includes 5 cm x 7,62 m (2" x 25') roll of black wrap tape, two Vance & Hines wrap clamps and six locking stainless steel ties

IMPORTANT NOTICE: Use of this Vance & Hines Header Wrap Kit (PART #1861-0622) may void all warranties of the exhaust system that this Kit is applied to. Header Wrap functions to insulate heat generated by exhaust gases flowing through the headpipe, thereby raising the headpipe temperature beyond its intended operating temperature. Using heat wrap may compromise the integrity of the headpipe material, and may ultimately lead to cracks in the headpipe and will not be covered under warranty. Use of header wrap on an exhaust system is a modification to and not a normal use of an exhaust system. This notice is intended to inform the buyer to consider this possibility before using this product.

NEEDLE BEARINGS

- Rollers are made from bearing steel (JIS SUJ-2/SAE 52100/DIN 100 CR6) and have been subjected to heat treatment and precision grinding radius diameter deviation; the hardness is HV700-860 (HRC60-66)
- All the raw material comes directly from Japan
- High-purity Chromium Molybdenum alloy steel (JIS SCM415) with Carbon Nitriding heat-treatment process
- The hardness specification is at HV500~HV600; it always can meet the requirements of high-speed engine applications
- Heat-treated and ground to precision tolerances for reduced heat and extended life

UNIVERSAL CLAMP-ON AIR FILTERS

- K&N® universal air filters come in four styles — round straight, round tapered, oval straight and oval tapered
- All round straight types and oval tapered types have rubber end caps (unless noted differently)
- All round tapered types have chrome end caps
- All clamp directly to the carburetor throat, replacing the stock airbox and filter element
- Pleated design increases surface area airflow
- Match the outer diameter (OD) of your carb throat with the inner diameter (ID) of the filter (given in inches and millimeters)

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2200 °C (4000 °F)
- Because the iridium electrodes of these plugs can be shrunk to only 0,4 mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order and stock these plugs

POWERMADD

E3 RESISTOR SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

RICK'S MOTORSPORT ELECTRICS

STARTERS

- High-quality, low-cost alternative to OEM starter motors
- Affordable starter is constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

- These cracks allow the lubricating ingredients to penetrate directly into the rust via capillary action
- After freeing the parts, it leaves a thin film that lubricates, prevents rust, and aids in disassembly
- Universal application
- Highly resistant to microorganisms, bacteria, and fungi, and it is also bactericide-free
- Excellent cooling and lubrication performance

WIRE GAUGE SELECTOR

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.
