IMPELLERS

- Constructed of ultra high-strength, corrosion-resistant stainless steel
- Exclusive hub-end water seal keeps the nasty stuff out of precious parts
- Mirror-smooth finish and polished hub resists cavitation
- Impeller pitch is determined by casting, not bending

CONCORD: THE POWER TORQUE SERIES

- This unique impeller enhances all-range maneuverability with no slippage in water hookup
- Variable pitch offers both low-speed torque and all-out high speed in one impeller

X-PROP: HIGH SPEED AND ULTIMATE PERFORMANCE

- X-prop series impellers produce the most powerful propulsion in the water from an advanced design that incorporates a high-compression hub and cambered blades

DYNAFLY: MAXIMUM ACCELERATION

- Blade geometry designed specifically for high compression ratio jet-pump systems
- Improve acceleration and top end while eliminating performance holes
- Lower pitch angle is recommended for stock motors; higher pitch angle is recommended for modified motors; lower pitch angle can also be used with modified motors if improved acceleration is desired

NOTE: Choose impeller based on level of engine modification: Stock, Limited or Modified. See appropriate columns in chart.

NOTE: Lower pitch impellers recommended for high altitude, pulling or freestyle applications.

BATTERYMATE 150-9 LOAD TESTER/CHARGER

- This unique diagnostic load tester and constant current charger with automatic desulfating action saves valuable time in professional service workshops and prolongs battery life
- Six load test settings from 15A to 150A, suitable for all starter batteries from 2,5Ah to 45Ah
- Six charging amps settings, from 1A to 9A constant current, for correct and most time-effective charging of batteries 2,5Ah and greater
- Also unique is the special MF program, essential for the correct and vital first "commissioning" charge of motorcycle-type dry-charged maintenance-free batteries
- The program terminates the important constant current "bulk charge" at the correct voltage appropriate for any one of the various types of MF batteries now available, according to their particular impedance characteristics

- Incorrect commissioning charging of motorcycle AGM type MF batteries is the single biggest cause of premature battery failure
- For all 12V lead-acid starter batteries of 2.5 Ah capacity or greater, as used in motorcycles, ATVs, snowmobiles, personal watercraft and garden tractors
- Recommended by most motorcycle OEMs
- EU plug

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2.204 °C (4.000 °F)
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order spark plugs

CHAMPION SPARK PLUGS STANDARD AND RESISTOR TYPES

- Champion Powersport series plugs include all the features of their conventional plugs, but are built with extreme engine conditions and durability in mind
- Copper Plus motorcycle spark plugs have a copper core center electrode that allows for accurate control of heat range, optimizing performance and longevity for the spark plug
- Fine wire electrodes increase ignitability by reducing spark quench
- Increased bore clearances between shell and core nose reduces fouling caused by carbon deposits

N-3-C

- SAC-9 semi-conductor resistor for maximum EMI and RFI suppression
- NOTE: Part numbers beginning with "R" are resistor type.**

E3 RESISTOR SPARK PLUG

- Unique electrode shape maximizes the power created by the spark plug - Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC). Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated. Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

BOLD MAGENTA part numbers are new for 2026

STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing

- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable
